

Colour PVC Downpipe

Downpipe System For Patios & Housing

Colour PVC Downpipe System For Patios & Housing

Looks Better For Longer

Stratco PVC downpipes are co-extruded with an exceptional high gloss exterior grade finish, providing superior, long lasting protection and colour to any outdoor area or building.

Stratco colour PVC downpipes are sturdy:

- 100 times more scratch resistant than painted PVC
- 50 times more scratch resistant than painted steel
- PVC is extremely tough and long-lasting
- Requires little maintenance and won't rust
- Resists impacts - won't dent like painted steel downpipes.

Reduced Cost & Complexity

PVC downpipes are easy to join and require no expert trades - simply prime and glue. They are designed to integrate seamlessly with stormwater systems without any additional adaptors.

The attractive high gloss colour finish means you won't need to call the painter back to paint the downpipes.

Provides Peace Of Mind

Stratco PVC downpipes provide a complete system with all the components you need to complete the job. All components are manufactured to the highest quality by Stratco, a leader in the roofing, gutter and downpipe industry. Stratco PVC downpipe is manufactured right here in Australia and by special order Stratco can produce lengths up to 6m.

Colour Choice

PVC downpipe system components are available in a choice of Off White, Smooth Cream, Merino, Slate Grey or Gun Metal Grey to match popular patio and housing finishes.

How To.

MAINTENANCE Regular maintenance is essential to maintain the good looks of all Stratco products and to ensure you receive the maximum life-span possible in your area. Washing with clean water must be frequent enough to prevent the accumulation of dust, salts, and pollutants or any other material that will reduce the life of the product. Stratco steel products that are regularly washed by rain require no additional maintenance. No Stratco steel structure or materials are recommended for use over, or in close proximity, to swimming pools or spas. No material that retains water (such as dirt or paving sand) should be placed against the columns. Care must be taken when determining the location of Stratco steel products so that they are not placed in close contact with sources of pollution or environmental factors that could affect the life of the product. Refer to the 'Selection, Use and Maintenance' brochure for more information.
